

6. MPI: empirical vs theoretical speed-up

Amdahl prediction from the measured one-process MPI run at each n

Each point: median speed-up across 32 n values, 2.5-10 million; median of 3 runs at each n.

Overall wall-clock time: setup + search + gather (MPI) + file output; MPI startup excluded.

Amdahl: $T_{\text{serial}} / (S + C / W)$; S and C measured with one worker; W = processes x threads.
